

Debugging the 2020 Election Predictions

Team 8: Fahim Talukder, Greg Fields, Srinivas Kakade, Jacob Pollard, and Zhehui Li

Motivations and Objective

- We analyzed a variety of trends in the 2020 election results and in the polling leading up to the election.
- In both 2016 and 2020, polling systematically underestimated former President Trump.
 - This was most pronounced in the Upper Midwest region.
 - Does it also depend on demographic?
 - How does polling methodology affect these mistakes?
- Political campaigns craft policy and plan outreach campaigns based on polling. Accurate polling can dictate outcomes of elections.

Data Collection

- We used the official election results for both the presidential and senate races.
- To get demographic information, we used exit polling data from Edison Research.
 - Their raw data is proprietary; we assembled the results we needed from reporting by the New York Times and CNN.
- For pre-election polling, there are a large number of polling firms.
 - Many different methodologies
 - Widely varying quality
 - Different polling questions and demographic breakdowns

Data Collection

- We conducted a brief survey of results from many different firms and chose demographics we found most interesting.
 - Male, female, white, black, Hispanic/Latino, Republican, Democrat, Independent, 65+ years old, white with a bachelor's degree, white without a bachelor's degree
- Chose three pollsters who collected data on these demographics, all rated A+ by [fivethirtyeight.com](https://www.fivethirtyeight.com)
 - Monmouth University, Siena College, Marist College
- All three conduct polls by phone, we wanted to examine the impact of this
 - Emerson College, A- rated and collects ~25% of data by text, ~25% by online survey

Results of the senate and presidential elections

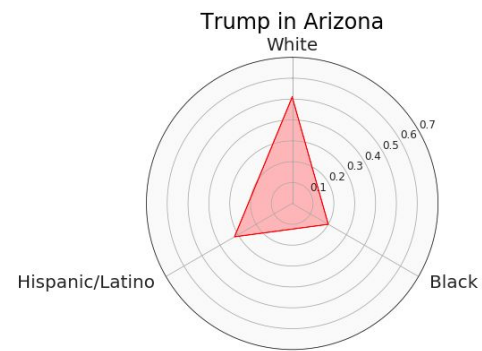

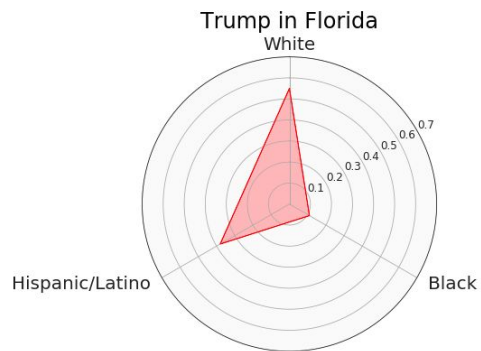

Presidential Election

Senate Election

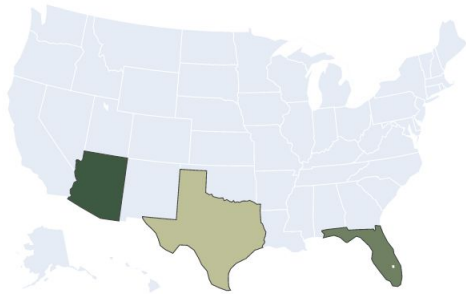

Ethnicity

Hispanic/Latino

Biden won Arizona by .3% where Latinos make up 23.6% of the voting population. He was the first Democrat to win there since 1996.

Shift in pre/post-election poll data among Hispanic/Latino voters for Biden

Shift in pre/post-election poll data among Hispanic/Latino voters for Trump

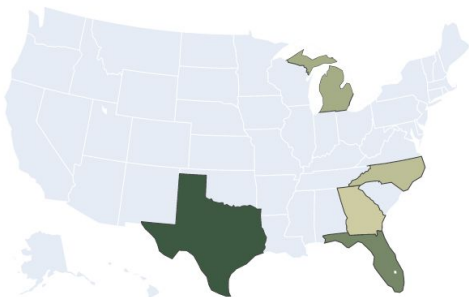

Black

Similarly strong, non-uniform shifts among Black voters

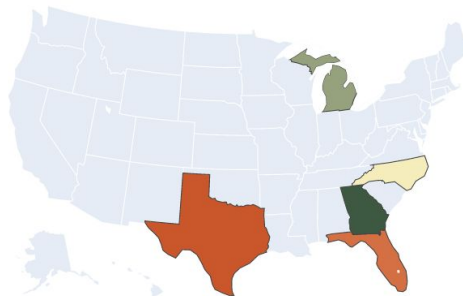

Shift in pre/post-election poll data among Black voters for Biden

Percentage Difference

Shift in pre/post-election poll data among Black voters for Trump

Percentage Difference

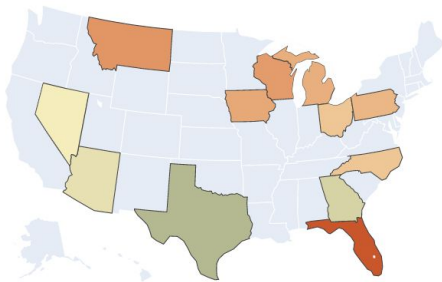

Age and education

Whites with bachelor's degree

Widespread shift in Trump's favor, particularly throughout much of the midwest and southeast.

Shift in pre/post-election poll data among White + BA/BS voters for Biden

Shift in pre/post-election poll data among White + BA/BS voters for Trump

Whites without bachelor's degree

These mirror the previous results, despite the two populations having different voting tendencies

Shift in pre/post-election poll data among White + No BA/BS voters for Biden

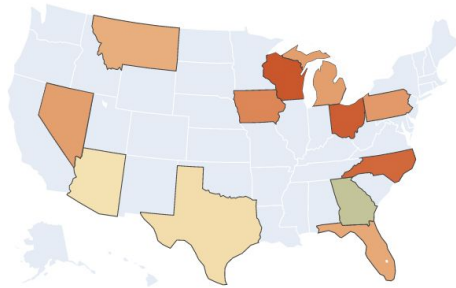

Shift in pre/post-election poll data among White + No BA/BS voters for Trump

Age 65+

Shift in pre/post-election poll data among 65+ voters for Biden

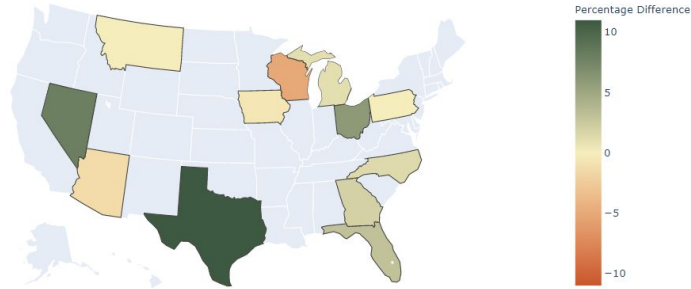

Shift in pre/post-election poll data among 65+ voters for Trump

Independent voters

Independents broke more for Trump than for Biden in most of the country, particularly in the Upper Midwest.

Shift in pre/post-election poll data among Independent voters for Biden

Shift in pre/post-election poll data among Independent voters for Trump

Polling methodology

Polling by phone interview in blue and by a mix of phone, text, and online survey in yellow.

Support Among Independents for Trump in Various States

Future Directions

- This is a very rich problem with many dimensions that we didn't have the time or data to explore. Some of the most interesting follow-up questions include:
 - Formulating an objective score of candidate ideology and conditioning on that
 - A direct comparison of presidential and congressional candidates per district
 - Incorporating turnout data and comparing with polling sample distributions
 - Conditioning on preferred source of news and social media

Thank you!
